1	1	06/05/2021	Technical clarification	We want to evaluate whether we have to present only staff based in IO site or whether you accept the proposal of occasional visits to ITER facilities.	although currently due to the pandemic the presence on site is not strictly necessary but once this situation improves the contracted staff is required to be present. Since some of the 3D models can be quite large it is also advisable that the staff is, if not directly on site, working near ITER to improve efficiency and avoid HMI delays. Also some of our software the staff might use e.g. ANSYS have geographical limitations.	06/05/2021
